

Bifrost Subscription Billing

An app for Microsoft Dynamics 365 Business Central, on Bifrost Foundation

Run recurring billing without clicking through every contract.

Bifrost Subscription Billing lets an integration, a scheduled routine or an assistant do the work behind the action buttons in Microsoft's Subscription Billing app. It uses Microsoft's own Subscription Billing logic and reimplements none of it, so results appear in the standard pages. It is an add-on to Bifrost Foundation.

What it does

- Puts subscriptions on contracts: apply a package and attach lines to customer or vendor contracts; Microsoft's rules work out prices and dates.
- Bills a contract or a whole run: one contract to an unposted invoice, or a billing proposal turned into documents.
- Shows the result before you bill: preview a contract or a run with real figures, without keeping anything.
- Bills for usage: deliver a usage file and move it through Microsoft's processing stages.
- Closes the period: release deferrals, rebuild contract analysis, extend a subscription or create a renewal quote.
- Moves subscriptions in: turn staged import rows into real subscriptions and contracts.

Who it is for

Business Central customers on Microsoft's Subscription Billing who want the monthly run, usage billing and period close to run by themselves.
